- Covad Site-to-Site VPN between the two managed firewall sites
- A dedicated firewall/VPN appliance at both offices

Recommended Add-ons:

- Add more locations for only \$99 each per month
- Three Remote User VPNs for only \$59 per month
- Desktop protection for only \$4 per user per month

Connect with Confidence

Secure communications between offices

It seems like a catch-22. You need to keep your company network secure, but your offices need to exchange information freely to keep your business productive. Is there a way to connect and protect at the same time? With Covad there is. Covad first connects your offices using high-speed business-class broadband, and then helps to protect them with comprehensive network security solutions that help keep your communications safe and secure.

MANAGED FIREWALL. Covad Managed Firewall service provides your first line of defense in protecting your business assets from external threats. By regulating all inbound and outbound traffic on your network, it controls what information gets in or out, and which applications can be accessed.

SITE-TO-SITE VPN. Covad shields your sensitive information as it travels between offices by encrypting it using Internet Protocol Security (IPSec) technology. This encryption helps ensure your data won't be modified or viewed while in transit, allowing you to communicate with confidence.

MANAGED AND MONITORED. Covad manages and monitors your firewall and site-to-site VPN services from setup to configuration to ongoing changes. Each office receives a dedicated firewall/VPN appliance for optimal performance. Your Internet connection is constantly monitored, and if it goes down, we begin problem diagnosis and resolution automatically.

REMOTE USER VPNs. The Covad Remote User VPN securely connects mobile employees and telecommuters to your corporate network using their PCs and whatever broadband connections they have available—Wi-Fi, DSL, cable, even dial-up. Once the connection is established, their data travels through a secure, encrypted tunnel.

DESKTOP PROTECTION. Employee workstations are another entry point for viruses, spyware, phishing, and identity theft. Covad offers McAfee® Total Protection™ for Small Business software. It provides continuous, automatic protection that's always on and always up to date.

COVAD MAKES IT EASY. Choose Covad to help protect and secure your communications while providing reliable business-class broadband access. With one provider, one bill, and live 24x7x365 expert support, you can focus on what really matters—your business.
